

CONDENSATE PUMPS

ClearVue™ Pump - No Float, No Problem.

The new ClearVue™ condensate pump from DiversiTech is unlike any other pump available. ClearVue™ features iQ Technology™ which makes ClearVue™ the smartest condensate pump on the market. iQ Technology™ provides ClearVue™ the ability to “think” and adapt to changing conditions. It’s not just off or on like a regular pump. ClearVue™ senses the amount of condensate water in the tank and its rate of inflow and adjusts its speed and lift to match the conditions and keep the tank clear. ClearVue™ also features Floatless Sensor™ Technology to detect the water level and rate of inflow, and decide what to do next.

iQ Technology™:

Variable Lift: The variable lift in ClearVue™ assures that the pump impeller is spinning only as fast as is needed to lift the condensate water to the height needed. A slower spinning impeller means significantly less noise than conventional condensate pumps. Variable speed is a proven, quieting feature in furnace blower motors. This electronically controlled technology is now available in the ClearVue™ Pump.

Self Cleaning: One of the most common problems in condensate removal is the blockage of a drain line downstream from the condensate pump. Just like DiversiTech’s popular clog clearing gun, a little bit of pressure is often all that is needed to clear the clog. By monitoring pumping conditions, ClearVue™ is able to detect when a drain line is partially or fully clogged. In these instances, ClearVue™ increases the pressure in the drain line to attempt to clear the clog.

Floatless Sensor™: Conventional pumps use an electro-mechanical float switch to turn a condensate pump on and off, and to detect a potential overflow condition with a high level alarm. Electromechanical float switches are prone to mechanical failure, debris fouling, and misalignment. DiversiTech’s patent pending Floatless Sensor™ eliminates many of the mechanical problems associated with conventional condensate pumps.

Other high level features include single button drainage, alarm terminals, a reversible deck, a see-through tank, stainless steel hang tabs, and anti-vibration rubber feet.
