

Introducing

OneFlow®

Tankless water heaters can be a breeding ground for scale. Heat increases the tendency for limescale deposits to form; the higher the heat the greater the buildup. Tankless units are designed to operate at high efficiency. Hard water can work against that efficiency by forming scale on critical components resulting in malfunctions and calls for service.

Now there's a solution – OneFlow®. The same anti-scale technology that's been used successfully in commercial plumbing is now designed to protect tankless water heaters in your home or small business. OneFlow® Model OFTWH for tankless water heaters is a cost effective and proven technology to ensure scale-free operation for your tankless water heater. For more information, visit our web site TheScaleSolution.com or contact your local Watts representative.

The Intelligent Scale Solution™ for Tankless Water Heaters

Model OFTWH

Benefits

- Compatible with all major tankless water heater brands
- Maintains manufacturer's stated water heater efficiency
- Works to prevent heater malfunction due to scale build-up
- Diminishes existing scale problems and costs associated with de-scaling
- Environmentally friendly alternative to water softeners

Features

- Designed for tankless water heaters up to 10 gallons per minute
- Virtually maintenance free – no salt or chemicals to add or maintain
- No electricity or backwashing required
- Simple sizing & installation with standard $\frac{3}{4}$ " connections and included mounting bracket
- Inlet ball valve and filter wrench for easy shutoff and filter changes
- Long lasting OneFlow® cartridge – change once every two years

Water Heater Valves, Quick-Connect Fittings
and WaterPEX® tubing

Make Scale History with OneFlow®

Hard scale can accumulate over time on pipes, valves, fixtures and heating elements causing a multitude of problems. Once formed, these scale deposits are highly insoluble and difficult to remove. Deposits can reduce the inner diameter of pipes causing restrictions in flow rate and overheating problems in heating systems. Remediation efforts can be very expensive.

The Intelligent Scale Solution™

The OneFlow® Anti-Scale System provides protection from scale formation on internal and external plumbing surfaces. The OneFlow® Model OFTWH is a single cartridge-based system that is easily installed on a cold water line prior to a tankless water heater. Once installed, the system requires very little maintenance, no backwashing, no salt and no electricity. It is truly The Intelligent Scale Solution™.

To learn more about OneFlow® anti-scale technology and how it can solve your scale problems, visit our web site TheScaleSolution.com or contact your Watts representative.
