CHOOSE RELIABILITY AND EFFICIENCY. RIGHT NOW.

HEAT PUMPS

14 to 16 SEER, 8.2 to 9.0 HSPF Single Stage and Two Stage
SOME DECISIONS ARE TOUGH. THIS ONE ISN’T.

When you consider an Blue Ridge™ system, quality and value are a given. You’re getting peace of mind with great features and a smart design—and best of all, you get it right now.

Efficiency ratings
Consider the SEER and HSPF ratings that measure system performance. Higher numbers mean greater efficiency and lower energy bills for you.

Superior coil protection
For durability in harsh environments, corrosion protection technology is featured on select Blue Ridge heat pump units, protecting against corrosive elements and extending the life of your heat pump for years to come.

Immediate savings
With a high-efficiency system, you may qualify for local utility and energy incentives as well as rebates. Your Blue Ridge professional can provide you with the latest information so you can take full advantage of available money-saving opportunities.

Is it time to replace your unit?
It can be hard to decide whether to repair or replace. Here are a few things to keep in mind when you’re deciding:

• **Age of the unit** – Consider a new unit if your heat pump is 10-12 years old.

• **Updates** – New technology makes units more efficient and easier to control. Plus, older units use R-22 refrigerant that’s scarce and expensive to recharge.

• **Repair costs** – Once repair costs exceed 50% of the cost of a new unit, a new purchase might be in order.
WHATEVER YOUR NEEDS, A BLUE RIDGE™ HEAT PUMP IS THE RIGHT CHOICE, RIGHT NOW.

4HP16LT
Creating a home environment that’s perfect for you.
With efficiencies of up to 16 SEER and 9.0 HSPF, the 4HP16LT exceeds federal energy-efficiency standards. Beyond lowering your monthly energy bill, this unit operates at lower speed with longer cycles—allowing for more even temperatures, quieter operation and better humidity control.

4HP15L
Saving you more, month after month.
The 4HP15L delivers significant energy savings and efficiencies of up to 15 SEER and 8.5 HSPF, when paired with a matched Blue Ridge variable-speed or constant-torque furnace or air handler. Your Blue Ridge dealer can recommend the right pairing for your home.

4HP14B
Getting back to normal, quickly and effectively.
Offering efficiencies beginning at 14 SEER and 8.2 HSPF, the 4HP14B is the easy way to replace an old unit and gain efficiency and reliability.

Over the years, a hardworking Blue Ridge™ heat pump can save you hundreds of dollars on utility bills.

U.S. Average Five-Year Electric Cumulative Energy Savings for High-Efficiency Heat Pumps vs. 10 SEER. Energy Efficiency and Renewable Energy Network, U.S. Department of Energy. The U.S. national average is used for electricity consumption. Actual cost savings may vary depending on personal lifestyle, system settings, equipment maintenance, local climate, actual construction, installation of equipment and duct system, hours of operation and local utility rates. This information is intended as an example for comparison purposes only.
Proper sizing and installation of equipment is critical to achieve optimal performance. Split system air conditioners and heat pumps must be matched with appropriate coil components to meet ENERGY STAR criteria. Ask your contractor for details or visit www.energystar.gov.

MAKE THE BLUE RIDGE™ DECISION YOU WON’T REGRET.

When you think about everything Blue Ridge delivers, your decision is easy. With Blue Ridge, all your heating and cooling questions are answered. The performance and reliability you want are right here, and ready to go to work.
